Re'em Armored Ford F-350

- Rugged, durable, with the ability to handle anything
- Suitable for SOF requirements
- Strong, secure, able to carry heavy loads
- A reliable and dependable workhorse

Re'em Armored Ford F-350

Rugged, durable, with the ability to handle anything

Re'em designed and modified a commercial Ford F-350 into an armored off-road pickup. The overall weight has been increased to 6000 kg with 1300 kg payload. Famed as one of the most rugged and durable pickups ever, the Re'em armored Ford F-350 takes that strength to a new level. Whether it is off road, over obstacles, or up the steepest gradients, the Ford F-350 can take it.

Suitable for SOF requirements

Plasan Re'em provides SOF operators with covert mobility by acquiring commercial vehicles that are representative of indigenous operating environments and modified to meet SOF-unique requirements.

High-End Internal Design

Strong, secure, able to carry heavy loads

The Re'em armored Ford F-350 passenger module is compact and strong, providing the secure space needed to get up to 5 passengers and their equipment through dangerous situations. Armor panels, passenger module, structural reinforcements, along with high-performance suspension and electrical systems, give the Re'em Ford-350 strength and the ability to handle anything.

A reliable and dependable workhorse

A rugged, extra strong vehicle able to carry heavy loads and absorb the stresses of rough terrain and even rougher treatment, the Re'em armored Ford F-350 is the result of long-term design evolution and numerous innovations. Carefully designed for weight control, utilizing Plasan Re'em light weight solutions (52-60 kg/m², multi-hit 25mm between shots) and strength, the finished product looks like a standard civilian model – but has military grade strengths.
